AGENT FACTORY

Reminders that respect consent, and an AI receptionist that answers the phone

ITECH3208 / 3209 · Federation University · Client: Zakir Ullah Shah · Sprint 5 poster session

Web app + CRM accounts, contacts → **Consent gate** opt-in, STOP, quiet hours → **Reminders engine** no double sends → **SMS, voice, email** Twilio and SMTP → **AI receptionist** FAQ, handoff, booking

1 Project definition

Project goal

Give clinics, salons and trades reminders that never message anyone who has not opted in, and an AI receptionist that answers their phone, on one platform they control.

The problem

Small businesses lose bookings to no-shows and missed calls, and cannot risk messaging people who never agreed to be contacted.

Sprint 5 goals (each one checkable)

Close the gaps found against the client brief: reminder controls, templates, rescheduling, call summaries, site	LIVE
Prove delivery end to end: an email reminder lands on time	DONE
Keep each organisation's data separate: activity, analytics, exports	LIVE
Prove SMS delivery: Twilio registration is in review	IN REVIEW

2 Technical status and demo

Try it now

Our website

1. Scan the code for our website, tap Open Web UI, sign in (ask us for the login)
2. Contacts tab: opted-in and opted-out people
3. Reminders tab: opted-out contacts and past dates are refused
4. Call +1 802 444 8729: ask the hours, then say goodbye
5. Activity tab: the call, with its summary, sentiment and priority
6. MyAI tab: ask how to add a contact, or preview a patient chat

761 automated tests, run by CI on every change

403 reply to any forged Twilio call

7 s email reminder arrived after its send time

Live a real call answered by voice

Problems we found and fixed

- Gmail dropped our connection: fixed the hostname we announce
- Forged calls could reach the receptionist: every webhook is signature-checked
- Dashboard counted every call turn as a call: counts real calls
- Dashboard showed invented rates: now live data only
- Send Reminder only wrote a log row: it now really sends

3 Roadmap and problem solving

Finished and live

- Accounts, contacts, CSV import
- Consent, STOP, quiet hours
- Reminders: repeat, pause, templates
- Voice receptionist, call summaries
- Roles, API keys, MyAI help

In progress

- SMS: Twilio registration in review
- Contacts kept across restarts
- Final checks with a live call

Still to do

- Recordings, handover pack
- Client feedback
- Journals and interviews

Path to completion: live test call (Dilraj) → SMS approval (Prabhjot) → recordings and handover pack (all) → journals and interviews (everyone)

Risks and what we are doing

Risk	What we are doing
SMS waits on Twilio registration	In review; voice and email work now
Live demo needs a network	Backup recording ready
Patient data must stay private	Consent first; each organisation separate
Old tickets did not match the code	Audited every ticket against the code

4 Team integration and Q&A

Dilraj Singh
Product owner, lead developer
Ask me about: Receptionist, call summaries, cloud setup

Prabhjot Singh
Scrum master, full-stack
Ask me about: Reminder controls, email, webhook security

Dhiman Roy
Backend: accounts and consent
Ask me about: Templates, rescheduling, roles and API keys

Saifur Rahman Bhuiyan
Delivery, analytics, web
Ask me about: Live dashboard, voice languages, site

Python · FastAPI · SQLite · Twilio · Claude · Docker Cloud based. Demo clinic and data are fictional.
