AGENT FACTORY

Reminders that respect consent, and an AI receptionist that answers the phone

ITECH3208 / 3209 · Federation University · Client: Zakir Ullah Shah · Sprint 5 poster session

1 Project and sprint goals

Project goal

Intelligent, privacy-first communication for service businesses. An organisation registers, manages contacts who have opted in, and schedules reminders that go out by SMS, voice and email. An AI receptionist answers calls on the same platform.

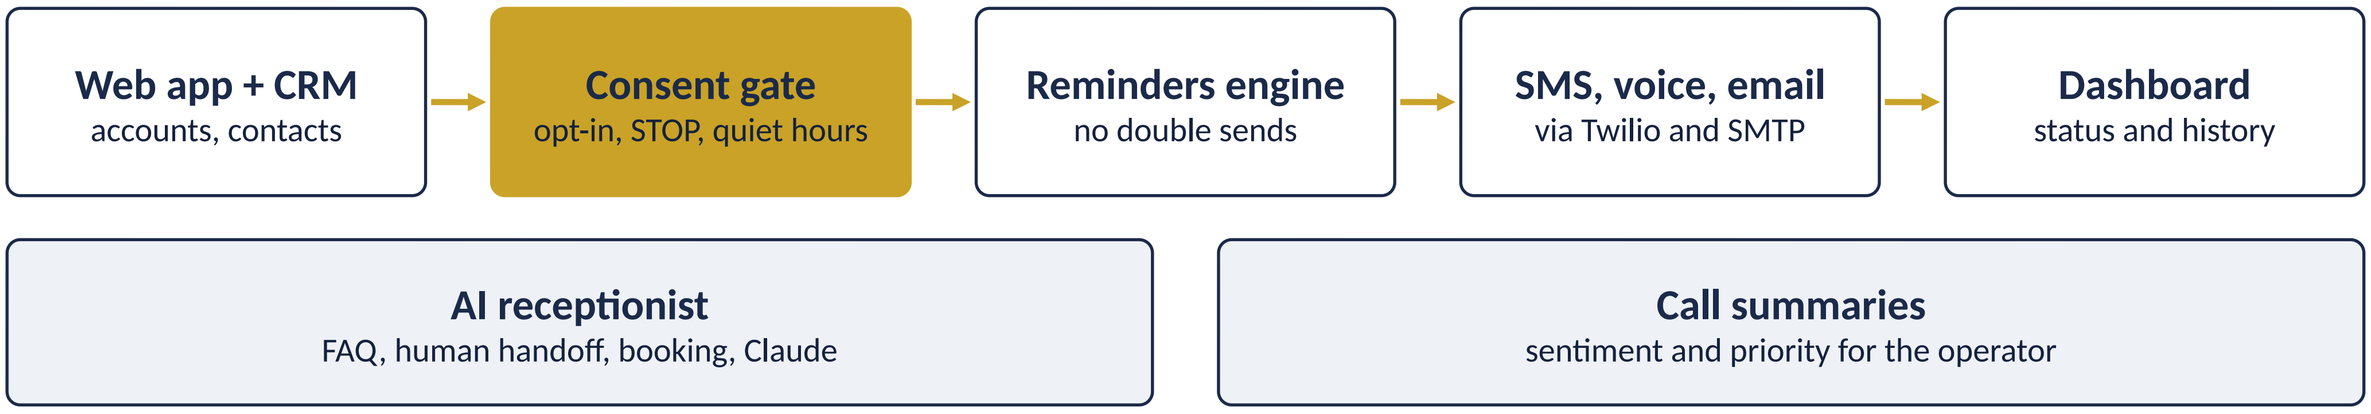

Sprint 5 goals

- Put a live, reachable demo online
- Close the gaps we found against the client brief
- Show a working demo and an honest roadmap

2 Demo: try it now

1. Scan the code and sign in (ask us for the demo login)
2. Contacts: see who has opted in and who has opted out
3. Schedule a reminder: the consent gate blocks opted-out contacts
4. Call +1 802 444 8729 and ask what we offer

Live demo

516 automated tests · CI on every change · signed webhooks · a real call answered by voice

3 Roadmap and risks

Done

- Accounts, contacts, CSV import
- Consent rules and STOP
- Reminders engine
- Voice receptionist live on Render

Built, ships with next deploy

- Post-call summaries
- Booking survives side questions
- Login and site fixes

Next, highest priority first

- Templates and merge fields
- Recurrence and pause in the form
- Email live, SMS evidence
- Site rework and use cases

Risk	What we are doing
SMS blocked by carrier registration	Demo voice, email and dashboard; explain it
Free host sleeps and loses data	Wake it first; demo data reloads on boot
Demo is cloud, brief says on-premise	Written note; we say so on the poster
Tickets and merged code out of step	Audit every ticket against the code

4 Team

Dilraj Singh
Product owner, lead developer
Integration, hosting, receptionist

Prabhjot Singh
Scrum master, full-stack
Reminders UI, email, evidence

Dhiman Roy
Backend: accounts, consent
Templates, rescheduling, auth

Saifur Rahman Bhuiyan
Delivery, analytics, web
Marketing site, exports

Python · FastAPI · SQLite · Twilio · Claude · Docker Demo data is fictional. The target deployment is on-premise.
