AGENT FACTORY

Reminders that respect consent, and an AI receptionist that answers the phone

ITECH3208 / 3209 · Federation University · Client: Zakir Ullah Shah · Sprint 5 poster session

1 Project definition: goal and sprint goals

Project goal

Give clinics, salons and trades reminders that never message anyone who has not opted in, and an AI receptionist that answers their phone, on one platform they control.

The problem

Small businesses lose bookings to no-shows and missed calls, and cannot risk messaging people who never agreed to be contacted.

Sprint 5 goals (each one checkable)

Close the gaps found against the client brief: reminder controls, templates, rescheduling, call summaries, site	BUILT
Prove delivery end to end: an email reminder lands on time	DONE
Keep each organisation's data separate: activity, analytics, exports	BUILT
Prove SMS delivery and host the demo on-premise	NEXT

2 Technical status and demo: try it now

1. Scan the code and sign in (ask us for the demo login)
2. Contacts: opted-in and opted-out people
3. Schedule a reminder: opted-out contacts and past dates are refused
4. Call +1 802 444 8729: ask the hours, then say goodbye
5. Activity tab: the call, with its summary, sentiment and priority

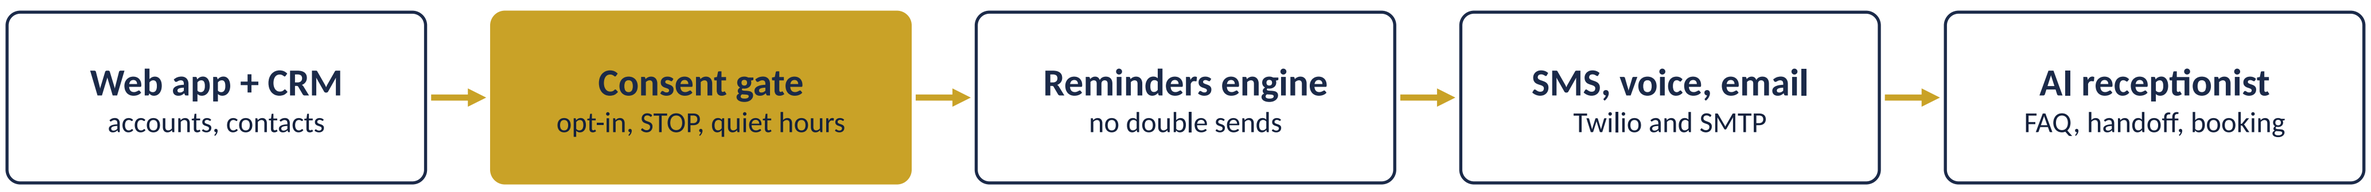

Live demo

708
automated tests, run by CI on every change

403
reply to any forged Twilio call

7 s
email reminder arrived after its send time

Live
a real call answered by voice

3 Roadmap and problem solving

Finished and live

- Accounts, contacts, CSV import
- Consent rules and STOP
- Reminders engine
- Voice receptionist

Built, going live at next deploy

- Recurrence, pause, templates
- Rescheduling, call summaries
- Roles, API keys, exports
- Per-organisation data

Still to do

- SMS: waiting on carrier approval
- On-premise Mac mini host
- Recordings, handover pack
- Client feedback

Path to completion: redeploy and live test call (Dilraj) → SMS approval (Prabhjot) → Mac mini host (Dilraj) → recordings and handover pack (all) → journals and interviews (everyone)

Problems we found and fixed

- Gmail dropped our connection: fixed the hostname we announce
- Forged calls could reach the receptionist: every webhook is signature-checked
- Dashboard counted every call turn as a call: counts real calls
- Dashboard showed invented rates: now live data only

Risk	What we are doing
SMS blocked by carrier registration	Registration submitted; demo voice and email
Free host sleeps between visits	Wake it first; backup video ready
Demo host is cloud, brief says on-premise	On-premise Mac mini in progress; stated openly
Old tickets did not match the code	Audited every ticket against the code

4 Team: everyone owns a part and can answer for it

Dilraj Singh
Product owner, lead developer
Ask me about: Hosting, receptionist, call summaries

Prabhjot Singh
Scrum master, full-stack
Ask me about: Reminder controls, email, webhook security

Dhiman Roy
Backend: accounts and consent
Ask me about: Templates, rescheduling, roles and API keys

Saifur Rahman Bhuiyan
Delivery, analytics, web
Ask me about: Live dashboard, voice languages, site

Python · FastAPI · SQLite · Twilio · Claude · Docker Demo data is fictional. The target deployment is on-premise.
